6,205
kids

4,706
Medicare
Recipients

579 Native Americans
849 Expectant Mothers
680 Veterans

"Federally-Qualified Health Centers (FQHCs) are an important component of quality care for Wyoming citizens in the greatest need. We need to continue to assist communities in establishing FQHCs where needed and support those organizations when they start up."

-Governor Mead in a letter to the Joint Appropriations Committee

WYPCCA
WYOMING PRIMARY CARE ASSOCIATION

2017
Annual
Report

The WYPCA and its network of community health centers have served Wyoming for over 20 years.

Currently this network consists of five general population health centers that operate in nine locations, and three special populations clinics that serve the homeless and migrant and seasonal farmworkers. We are growing and looking to make positive changes in the health care landscape of Wyoming.

Our Mission:

The Wyoming Primary Care Association exists to connect the people of Wyoming with quality health care— every person, every need, every neighborhood

Health centers not only benefit the well-being of Wyoming but its economy too...
